

EDIUS 11

Software Version 11.00.13349 – Release Notes – December 2023

New Features

EDIUS

** No features added*

Mync

** No features added*

Fixed Issues

EDIUS

- When multiple clips are selected in the Bin and "Add to Timeline" is executed, the clips are not arranged in the selected order in the timeline
- Context menu does not appear when right-clicking on a folder icon in the Bin window
- When the display mode of the clip view in the Bin window is switched, the folder tree is collapsed and the current folder is reset to the root folder
- Clicking or right-clicking a folder name in the Bin window starts unintended inline editing of the folder name
- When an effect settings dialog is maximized, some of the key frames set in the dialog are not applied to rendered clips or exported files (SFDC00824170)
- Bin tree and registered clips are invisible in a project (SFDC00871442)
- EDIUS crashes when a VisTitle template is dropped into the bin window
- When opening an existing project, Mync metadata is lost in inactive timeline sequences in the project
- During inline editing of the folder name in the Bin window, the [Return] and [Esc] keys do not function as confirmation or cancellation
- If the PC is woken up after sleeping for four hours or more with a project open, EDIUS crashes when operating the Bin, Mync, or Job window (SFDC00873981)

Mync

** No fix provided*
